

How do I get rid of irregular edges at the top or bottom of my panorama?

After creating a panorama, the edges are often irregular or rough. Follow the steps outlined below to remove these irregular edges.

1. Access get images from the File menu. A new Photovista window appears.
2. Navigate to where your images are stored.
3. Add all images and click OK.
4. Rotate the images and adjust them as needed.
5. Click the Stitch Image button.
6. Notice the red-dotted line. Move the cursor to one of the lines. When the cursor changes to a red arrow, hold down the left mouse button and move the line.

Notice that moving one line in one direction moves the other line in the opposing direction. To move the lines independently of each other:

- a) Navigate to the Panorama menu
- b) Uncheck the "Crop Symmetrically" option

7. With the crop lines appropriately placed, click "Save Panorama As..." from the File menu. Save the panorama as you would normally do. Consult the manual for details on saving a panorama.
